Part B: Domain Description

Describe your domain chosen for DV II

My chosen domain is the impact of Australian bushfires, with a focus on the 2019–20 Black Summer in the wider context of long-term fire patterns. The visualisation examines bushfires through multiple layers: burned-area scale, satellite-detected hotspots, planned and unplanned fire, economic loss, insurance claims, and wildlife vulnerability. Instead of treating bushfire severity as a single measure, the project shows how physical fire scale, human exposure and ecological consequences can tell different parts of the same story.

Describe the Why and Who aspects of your DV II

The target audience is the average Australian viewer who may know Black Summer as a major disaster but may not understand why burned area alone cannot explain bushfire severity. The main purpose is explanatory and story-driven. Viewers are guided to compare fire scale across time and regions, identify where Black Summer was exceptional, and understand why fires that burn less land can still cause severe financial or ecological damage. The visualisation helps the audience distinguish between natural or recurring fire regimes, uncontrolled forest fire, insured-loss exposure, and species vulnerability.

Describe the “What” aspect of your DV II

The project combines several public datasets. Long-term burned-area patterns are based on Australian fire extent and forest fire datasets, including DCCEE/ERIN fire extent data and ABARES/Fires in Australia's Forests 2016–21 attributes. Satellite hotspot timing uses NASA FIRMS MODIS active fire detections, cleaned and aggregated by month, region and fire season. Economic impact is based on the Insurance Council of Australia Historical Normalised Catastrophe Data, using normalised insured losses and claims information. Wildlife impact uses WWF Australia's Black Summer animal impact estimate, while threatened species analysis uses bushfire-related species and EPBC status data. The data includes spatial, temporal, categorical and quantitative attributes, such as burned area, hotspot counts, state, season, burn type, land tenure, insured loss, total claims and species group. Raw files were processed into smaller derived CSVs for web performance, including monthly hotspot summaries, state-season burned-cell metrics, planned/unplanned burn shares, tenure-category-burn pathways, and event-level insurance/burned-area matches. Where data could not be honestly joined, such as state-level ICA loss for Black Summer, I avoided fabricating values and used event-level matching instead.

Describe the “How” aspect of your DV II

The design follows Munzner's What/Why/How approach by matching idioms to tasks such as comparing, summarising, locating spatial patterns, identifying outliers and explaining relationships. A streamgraph shows thirty years of burned-area composition over time, while a state shift chart compares Black Summer with a pre-event baseline. A geographic hotspot map and bivariate burn map support spatial interpretation. A calendar heatmap reveals seasonal timing and contrasts national patterns with the southeast focus. Small multiples show state-level fire profiles, and a Sankey/alluvial view connects forest tenure, forest category and burn outcome. Economic charts include a timeline, bubble chart, domestic-commercial claim comparison, and an event profile comparing burned area with insured loss. Wildlife charts use a waffle/pictorial matrix and threatened-species bar chart to separate animal-count scale from conservation vulnerability. Interactions such as hover tooltips, filters, toggles, highlighting and zooming are used only where they improve interpretation. The page is structured as a scroll-based story with section introductions, annotations, source labels and insight boxes, making it accessible as a presentation rather than an expert analysis tool.

Part C: Sketch

A URL to a PDF document with an image of your sketch on your GitHub account.

Tip: Test your URL in incognito mode to ensure it is a working URL

URL to sketch: https://github.com/DaiDuongHoang/Assignment-2/blob/main/sketch%20handrawn_1.pdf

Paste a screenshot of your sketch for your DV II.

Note: Use the entire page here for the screenshot and ensure that it is clearly legible and visible
